Personal Summary

Senior QA Automation Engineer with 7+ years of enterprise-scale test automation and quality assurance experience, currently serving as Quality Assurance Automation Senior Associate at Peraton in direct support of **Department of State Consular Affairs** programs. Proven practitioner of **AccelQ** the **Forrester Wave™ Leader in Autonomous Testing Platforms**. With extensive hands-on expertise engineering **self-healing regression test suites**, dynamic parameterized action libraries, and **AI-powered autonomous test automation** frameworks across complex **Salesforce** enterprise applications and mission-critical government systems. Deep proficiency across **Selenium WebDriver**, **Behavior Driven Development (BDD)**, **Page Object Model (POM)**, and **Agile/Scrum** delivery environments, consistently producing measurable quality engineering outcomes at enterprise scale.

- Engineered **AI-powered autonomous test automation** frameworks using **AccelQ** reducing script development time by **25%** and scenario update cycles by **12%** across multiple Department of State application environments, while sustaining full **regression test suite** stability across continuously evolving mission-critical government platforms.
- Designed, maintained, and executed comprehensive **end-to-end test suites** and **automated test scripts** using **AccelQ**, **Selenium WebDriver**, and **Gauge** against a complex **Salesforce**-based enterprise application delivering structured **quality assurance automation** coverage across **functional, regression, smoke, and boundary testing** disciplines in direct support of **Department of State Consular Affairs** operations at mission-critical scale.
- Delivered dependable **regression testing** assurance across **20+ consecutive release cycles** executing robust, enterprise-grade **test suites** that provided the Department of State client with consistent, reliable validation that product development was progressing with integrity and performing as expected across every iteration.
- Generated detailed, step-by-step **test result documentation** and maintained structured **test metrics** recording core **QA KPIs**, test execution outcomes, defect trends, and **coverage reporting** across active **Agile sprint** cycles delivering reliable, data-driven visibility into application quality status and **release readiness** to both technical engineers and non-technical program stakeholders.

Technical Skills

- **AI Testing Platform**: Accel Q
- **Testing Tools**: Selenium WebDriver, Cucumber, TestNG, JUnit, JDBC, Rest Assured, Postman
- **Languages**: JAVA, Typescript, SQL, HTML, JS, XML
- **DB Management**: MySQL, Oracle
- **BMT**: Maven
- **Tracking tool**: Jira
- **CI/CD**: Jenkins
- **VCT/Repo**: Git/GitHub
- **Methodologies**: Agile Scrum, Waterfall

Work History

Quality Assurance Automation, Senior Associate — *08/2024 to Current*

Peraton | Virginia, United States

- Engineered enterprise-grade, self-healing regression test suites using AccelQ - a Forrester Wave™ Leader in Autonomous AI Testing Platforms reducing script development time by 25% and scenario update cycles by 12% across multiple Department of State, Consular Affairs application environments.
- Architected dynamic, parameterized reusable actions, intelligent context windows, and modular test steps within AccelQ's AI-powered autonomous testing framework enabling scalable, zero-redundancy test coverage across a complex, continuously expanding mission-critical government application.
- Designed, maintained, and executed automated test scripts, test scenarios, and end-to-end test suites using AccelQ, Selenium WebDriver, and Gauge against a complex Salesforce-based enterprise application delivering structured quality assurance automation coverage across functional, regression, smoke, and boundary testing disciplines while validating UI behavior, functional integrity, and data consistency across a continuously evolving platform serving Department of State Consular Affairs operations on mission-critical application – elevating regression result confidence across iterative Agile development cycles.
- Applied AccelQ's AI-driven UI capture engine to dynamically identify and interact with complex web elements, data fields, and interactive components eliminating selector brittleness and enabling resilient, self-healing test automation across a diverse, frequently updated interface.
- Leveraged AccelQ's intelligent debugging capabilities to maintain test script alignment across multiple concurrent, rapidly changing application environments ensuring continuous regression suite stability and accelerating defect detection cycles in support of an active government program delivery pipeline.
- Generated comprehensive, step-by-step test result documentation using AccelQ's AI-powered reporting framework producing clear, actionable quality assurance artifacts accessible to both technical engineers and non-technical program stakeholders, enhancing cross-functional delivery transparency and enterprise-level QA visibility.
- Maintained and continuously updated structured test metrics documentation recording core quality assurance KPIs, test execution outcomes, defect trends, and coverage reporting across active sprint cycles providing program leadership and cross-functional stakeholders with reliable, data-driven visibility into application quality status and release readiness.

Environment: Selenium WebDriver, Gauge, AccelQ (AI Autonomous Testing Platform - Forrester Wave™ Leader), Department of State Consular Affairs Enterprise Systems, Self-Healing Automation, Java, Salesforce, Cucumber, AI-Powered Test Execution, Agile, SQL, Git, GitHub, Maven, TestNG, Jira, Jenkins, REST Assured, IntelliJ IDEA, XPath, CSS, HTML

QA AUTOMATION ENGINEER — *04/2022 to 07/2024*

Marriott International | Maryland, United States

- Conducted functional testing to pinpoint critical aspects of the application and automated them using Selenium WebDriver and Cucumber, employing Gherkin language for script development.
- Developed, maintained, and optimized hybrid automation framework utilizing the Page Object Model and Behavior Driven Development (BDD) principles. This framework, built on Maven and Java OOPs concepts with Selenium WebDriver and Cucumber, boosting test efficiency. By automating repetitive tasks, it reduced manual effort by 37%.
- Performed Regression, smoke, exploratory, functional, UI, and cross browser testing on web applications.
- Effectively integrated the automated framework with Jenkins for and GIT, accelerating feedback cycles and cutting test execution time by 35%.
- Executed both manual and automated API testing with Postman and the REST Assured library, achieving a 28% decrease in API-related defects and enhancing overall system stability.

QA AUTOMATION ENGINEER I — *02/2020 to 04/2022*

Pentagon Federal Credit Union | Virginia, United States

- Assisted in the design and implementation of data-driven automated test scripts in Java using Selenium WebDriver using Maven to build and run automation framework and Jenkins for continuous integration and continuous deployment.

- Implemented and maintained automated test scripts in Java with Selenium WebDriver for smoke and regression test suites, achieving accurate identification of web elements across multiple browsers leading to an 21% decrease in regression testing time with consistent test coverage.
- Optimized the testing process by integrating Selenium WebDriver with TestNG, specializing in organizing test cases and suites for functional testing through the use of TestNG annotations reducing testing time by 18%.
- Documented test scripts and test cases according to test plans and requirements.

QA MANUAL TEST ENGINEER *02/2019 to 02/2020*

Instacart | California, United States

- Attended Daily Scrum, Sprint Grooming, Sprint Planning, Sprint Retrospective, and Sprint Demo meetings.
- Created, executed, and reviewed manual test cases with bugs reported into JIRA.
- Performed API testing manually using Postman tool with automation completed using Rest Assured.
- Involved in design and maintenance of Selenium WebDriver scripts for smoke, regression, and functional testing using data-driven framework.
- Assisted in performance of functional testing utilizing Selenium WebDriver in tandem with TestNG.

Education

Bachelor of Science | Biology *2018*
Virginia Commonwealth University, Richmond

Syntax Technologies, Coding Bootcamp *2018*

Certification: **ISTQB CTFL** Certified Tester Foundation Level *In Progress*
